

Schlumberger Foundation Faculty for the Future Fact Sheet 2021

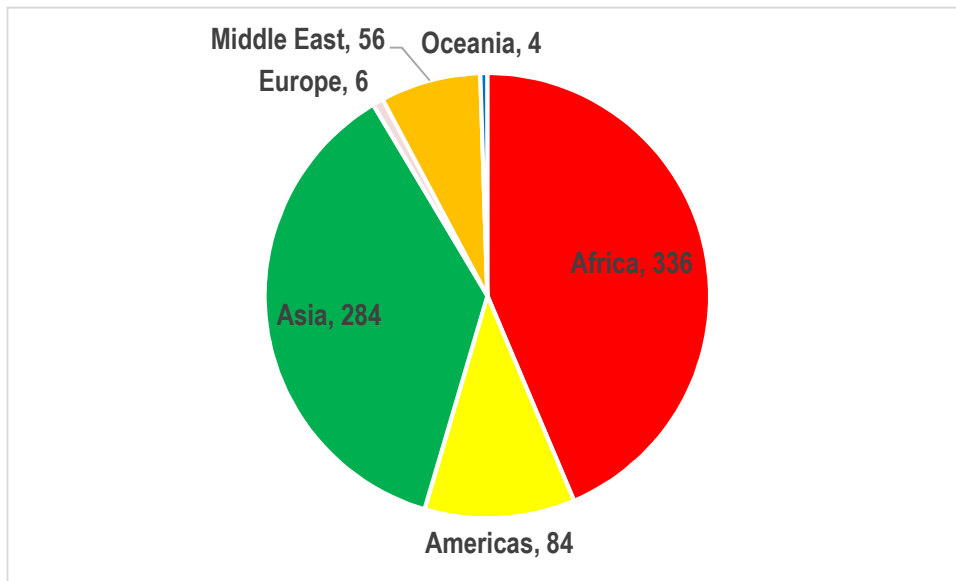

*The Schlumberger Foundation is an independent nonprofit entity that supports science, engineering and technology education. Recognizing the link between science, engineering, technology, and socio-economic development, as well as the key role of education in realizing individual potential, the Schlumberger Foundation's flagship program is **Faculty for the Future**.*

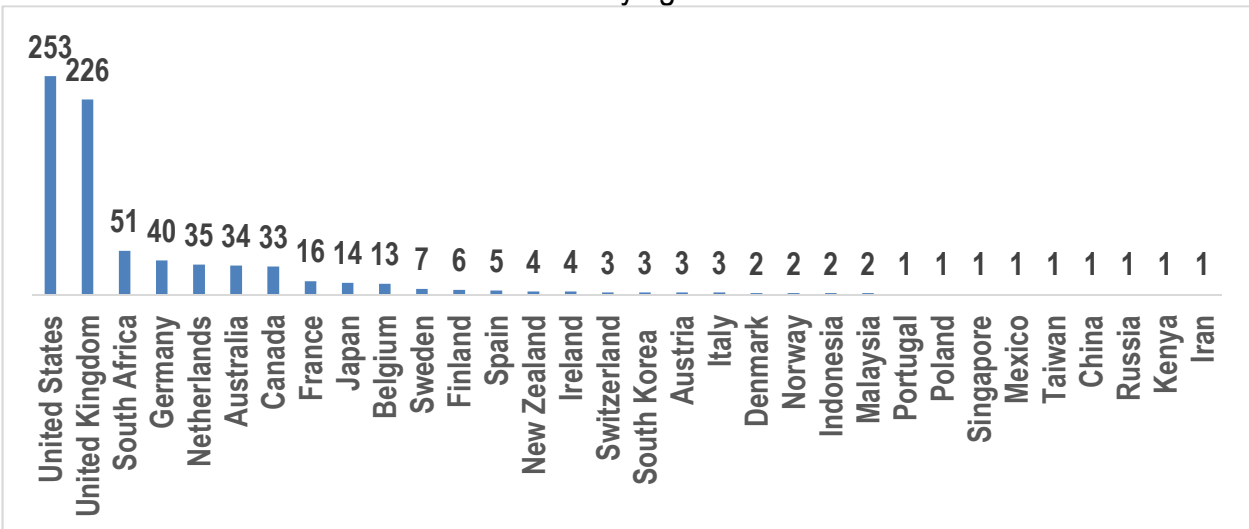

The Schlumberger Foundation Faculty for the Future program, launched in 2004, awards fellowships to women from developing and emerging economies to pursue PhD or post-doctoral studies in science, technology, engineering and math (STEM) at universities abroad.

The long-term goal of the Faculty for the Future program is to generate conditions that result in more women pursuing academic careers in scientific disciplines thus contributing to the socio-economic development of their home countries and regions.

The Faculty for the Future program is growing each year and has become a powerful community of **770 women scientists from 84 countries**.

The 770 Fellows and Alumni are studying in **32 host countries worldwide**.

Grant recipients are selected as much for their leadership capabilities as for their scientific talents. Ultimately, they are expected to return to their home countries to continue their academic careers, to further their research, to teach and to become inspirational role models for other young women.

Faculty for the Future grants are based on actual costs up to a maximum of USD 50,000 per year and may be renewed through to completion of studies subject to performance, self-evaluation, and recommendations from supervisors.
