

# SCHLUMBERGER FOUNDATION ANNOUNCES NEW AWARDS TO WOMEN IN STEM RESEARCH

The Schlumberger Foundation has, despite the global COVID-19 pandemic, continued its Faculty for the Future fellowship awards program for women from developing and emerging economies to pursue post-graduate studies in science, technology, engineering and mathematics (STEM) disciplines at leading research institutes around the world. For the academic year 2021–2022, fellowships have been awarded to 31 new recipients and 55 awards from previous years have been renewed, demonstrating the Foundation’s dedication to supporting talented women from countries where they are underrepresented in STEM research.

The top three disciplines being studied by this year’s awardees are climate and engineering; climate and environmental sciences, and health sciences. The Fellows are predominantly working on topics related to resolving key issues faced by communities in their own home countries and regions.

“Our program is reaching new applicants in an increasing number of underrepresented countries and we remain committed to supporting the large number of existing grantees whose progress and return plans are in line with the program’s goals,” says Roseline Chapel, President, Schlumberger Foundation. “We believe that our continued commitment to scientific education will contribute towards meeting some of the resulting challenges for years to come”.

This new round of awards demonstrates the Schlumberger Foundation’s long-term commitment towards building a community of highly qualified role models who can help narrow the gender gap in STEM disciplines by inspiring more women to study science. Fellowships are awarded based upon an applicant’s academic ability, leadership qualities and engagement in STEM outreach activities in under-served communities in their home countries. With the help of financial support from the Foundation, Fellows have achieved academic excellence throughout their studies, often despite considerable cultural, geopolitical, environmental or economic challenges.

“OUR PROGRAM IS REACHING NEW APPLICANTS IN AN INCREASING NUMBER OF UNDERREPRESENTED COUNTRIES AND WE REMAIN COMMITTED TO SUPPORTING THE LARGE NUMBER OF EXISTING GRANTEEES WHOSE PROGRESS AND RETURN PLANS ARE IN LINE WITH THE PROGRAM’S GOALS,”

**LAUNCHED BY THE SCHLUMBERGER FOUNDATION IN 2004,** FACULTY FOR THE FUTURE HAS GROWN TO BECOME A COMMUNITY OF 770 WOMEN FROM 84 COUNTRIES. IN 2021, 31 NEW GRANTS WERE AWARDED AND 55 GRANTS WERE RENEWED.

### → ABOUT THE SCHLUMBERGER FOUNDATION

The Schlumberger Foundation is a nonprofit organization that supports science and technology education. Recognizing the link between science, technology, and socio-economic development, as well as the key role of education in realizing individual potential, the Schlumberger Foundation flagship program is Faculty for the Future.

### ABOUT FACULTY FOR THE FUTURE

The program's long-term goal is to accelerate gender equality in STEM by generating conditions that result in more women pursuing scientific careers through alleviating some of the barriers they encounter when enrolling in STEM disciplines. The program is committed to gender parity in science and recognizes that full access to and participation in a STEM curriculum is essential for the empowerment of women and girls. By accelerating gender equality in STEM, the talent and capacities of these women can be developed for the benefit of their local communities, regions and nations.

The program awards fellowships for advanced research in STEM at leading research institutes abroad. Faculty for the Future Fellows are expected to return to their home countries upon completion of their studies to contribute to the economic, social and technological advancement of their home regions by strengthening the STEM teaching and research faculties of their home institutions as well as through their leadership in science-based entrepreneurship. They are also expected to contribute to the public sector where their newly acquired technical and scientific skills can help provide evidence-based support for STEM policy making, including topics of gender representation.

This program acts as a catalyst for these women to further tap into their potential. Through heightened motivation, sharpened self-awareness and a lasting passion for science they in turn capture the imagination of other women and girls around them to regard scientific pursuits as a necessary means towards advancement and growth.

Since its launch in 2004, 770 women from 84 countries have received Faculty for the Future fellowships for PhD and Post-Doctorate STEM research programs. Through interactive online tools and in-person meetings, the program provides a platform for these women to take joint action in identifying and unravelling the impediments that are holding back equal opportunities in STEM education and careers in their local communities and home countries.

**"WE BELIEVE THAT OUR CONTINUED COMMITMENT TO SCIENTIFIC EDUCATION WILL CONTRIBUTE TOWARDS MEETING SOME OF THE RESULTING CHALLENGES FOR YEARS TO COME".**
